ABOUT ME

Senior Frontend Engineer and Technical Lead with 9+ years of experience building SaaS products, MVPs, internal tools, and complex web applications with React, TypeScript, and modern architectures. I specialize in turning product ideas into reliable, well-structured software with speed and confidence, balancing fast execution with strong technical foundations, UI/UX thinking, and pragmatic product development. My experience also extends across backend, product infrastructure, and mobile development with Node.js, NestJS, Supabase, MongoDB, GraphQL, and React Native.

PROFESSIONAL EXPERIENCE

2026

FOUNDER & PRODUCT ENGINEER

[IgniteDX](#)

Built and launched an AI-powered pull request review SaaS focused on helping developers identify bugs, risks, and missed edge cases before merge. Led the product end-to-end, including product design, frontend and backend implementation, AI integration, GitHub App workflows, and overall user experience.

2021 - Present

FRONTEND TECHNICAL LEAD

[kiban](#)

Lead frontend initiatives across multiple B2B SaaS tools in the credit and fintech space, contributing to architecture, UI/UX, product structure, and team guidance.

2017 - 2021

ACCOUNT MANAGER & SOFTWARE DEVELOPER

[LK Asociados](#)

Managed client relationships while designing and developing digital solutions across web, e-commerce, and mobile. My work included WordPress websites, Shopify stores, mobile applications for surveys, and CMS platforms for managing custom e-commerce content.

This role combined delivery, communication, and implementation, helping me build a stronger understanding of both client needs and product execution. It also gave me early experience turning business requirements into real, usable digital products.

PROFESSIONAL EXPERIENCE

2015 - 2016 FRONTEND DEVELOPER / PROJECT MANAGER DSINTEG

This was my first professional role, where I began as a Frontend Developer contributing to the creation of company products, internal tools, SaaS solutions, and custom software for government and private-sector clients. Over time, I also expanded into a Project Manager role, leading requirement gathering and helping shape project scope based on client needs.

This experience helped me grow beyond implementation into product definition, client communication, and delivery coordination. It gave me early exposure to building software in complex environments where technical execution had to stay aligned with business and operational requirements.

EDUCATION

2011 - 2015 COMPUTER ENGINEERING Universidad Autónoma de Tlaxcala

EXPERTISE

FRONTEND

React - Astro - TypeScript - JavaScript - Next.js - Tailwind CSS - shadcn/ui

ARCHITECTURE & PRODUCT DEVELOPMENT

Frontend Architecture - Design Systems - SaaS Platforms - MVP Development - Internal Tools - UI/UX Collaboration

BACKEND & INFRASTRUCTURE

Node.js - NestJS - Supabase - GraphQL - MongoDB - REST APIs

MOBILE

React Native

TOOLS

Cursor - GitHub Copilot - Figma - Git - GitHub - Linear - Netlify
